Woerden, December 2025

Dear SilverFit Mile user,

We're happy to present the software update for the SilverFit Mile. In this letter, we explain the changes and improvements made in this software version:

1. New Tour movies
Over the past few months, several new film routes have become available, for example Aquarium Sea Life Paris, Deventer, Rome, and the Pyramids of Egypt. We've already prepared these and all other film routes for you on the USB stick.

Make sure your system is online, unless it has been deliberately set to offline. This way you avoid long installation times and automatically receive new film routes and updates, ensuring the system continues to function optimally.

In 2026, new routes will also be added, such as Cologne Christmas Market, Sallandse Heuvelrug, and special routes like the Nijmeegse Vierdaagse. There's plenty to look forward to!

2. Improvements in the Film Routes Installation Process
Installing film routes is now easier:

- Filter routes by region, category, or content types on the left side
- Use *Select All* to download all visible routes with a single click

When there is insufficient disk space, you can remove routes. These are sorted under *Recommended*; the recommendations are based on playback data. By hovering the mouse over a route, you can immediately see the details.
Quickly free up your disk space? Click *Select Recommendation* to remove all recommended routes at once.

3. Changes to Windows
The computer that runs the Mile software uses Windows. Microsoft has announced that support for Windows 10 will soon come to an end, which means it will no longer receive security updates. Over time, this could make computers more exposed to online risks, especially if they are regularly connected to the internet. To help keep your system safe and up to date, we recommend upgrading to Windows 11.

Important:

Installing Windows 11 is a technical process. We suggest having someone with IT experience handle this, such as an IT specialist. The installation can take at least one full workday, so please plan accordingly.

We understand that updating your system can feel complicated. That's why we've added a tool that will provide information on your situation and what is required. The Windows Upgrade check will check the status of your computer and give advice on the next steps. This tool is available in the menu, after clicking 'Software updates'*.

* *this functionality can only be used when the system is connected to the internet.*

4. Spotlight on Guess the Picture
This year, we introduced a new SilverFit album with the theme 'Italy'. It was used during our annual Tour SilverFit Mile event, and we plan to release more new albums in the future.
Albums can be used with the Guess the Picture feature in the Mile. Photos gradually appear on the screen, and residents can guess what's in the picture. The full image now stays visible for longer, encouraging conversation. Once revealed, a short description also appears. This way, we aim to stimulate both cognitive stimulation and social interaction while cycling.

Annual Event the Tour SilverFit Mile a Success Again!
We look back on a wonderful edition full of enthusiasm and cheerful faces. No fewer than 160 locations from the Netherlands, France, Belgium, and Germany took part. In total, 2,327 residents cycled together for 188,182 minutes through beautiful Italy. The oldest participant was 104 years old — an outstanding achievement!

Scan the QR code to (re)watch the aftermovie on our website and get a taste of the atmosphere.

Suggestions or ideas?
We are already working on our next update with new features. If you have suggestions or ideas for the SilverFit Mile, please let us know by emailing mile@silverfit.nl

Best regards,

Team SilverFit
